

Bioremediation of Chlorinated Solvents (Proceedings from the Third International in Situ and On-Site)

The articles in this book discuss the rapidly changing field of bioremediation of chlorinated solvents, PCBs, and other chlorinated compounds, as well as PAHs, both in situ and on site. This landmark publication reports significant advances in bioremediation, with an emphasis on practical applications and state-of-the-art developments. Laboratory and field-oriented reviews are presented with the objective of tying treatability studies and laboratory developments to field applications. This reference source gives you access to a variety of current techniques and methods for the bioremediation of chlorinated and polycyclic aromatic hydrocarbon compounds.
