

GENDER DIFFERENCES: The Eyes Have It

OTHER PERSONAL & RELATIONAL ENHANCEMENT BOOKS AT www.lifefocus.org Chapter One BODY-MODEST and SOUL-MODEST Needs and desires following gender lines generally drive men and women. The woman's area of modesty centers on body-modesty. She is hesitant to expose her physical self. Man's physical nakedness does not embarrass him, but he is reluctant to reveal his inner-self's soul-modest. Sexual attraction for men begins with the eye gate. Sexual attraction for women begins with the ear gate. A man with a gift for tender talk raises her emotional voltage.

Chapter Two DIFFERING VIEWS: His and Hers Men and women are different in development stages from the cradle-to-the-grave. Studies document unique differences between baby boys and girls in patterns of communication from the first day in the hospital nursery. Men and women rely on different brain functions that affect the style and quality of communication. Men generally prefer left-brained functions, and women are more inclined to right-brained functions. The use of emotional word pictures speaks to the right side of the brain, helping left-brained people understand feelings, and also words. Chapter Three CREATED AND SOCIALIZED FOR DIFFERENCE Man is generally viewed as logical and steady yet impersonal. Woman is viewed as intuitive and changeable yet personal. Men, priding themselves in logic, study the evidence; then step by step, in orderly fashion, reason to a conclusion. Women are intuitive they often know without knowing how they know. They rely on instinct, on emotion. They seem to have a sixth sense. .

Chapter Four PERCEPTUAL DIFFERENCES: What We Focus On Is Important A recurring problem throughout history has been one of perception, and the differences between female perception and male perception are no different. Women

and men commonly get frustrated with each other because they see many issues completely differently. Whatever the reason for these differences, they can be a source of frustration when we cant understand the behaviors or thoughts of the opposite sex. Dr. Ray and Carol explain in this chapter that closing the gap in gender differences usually requires only minor adjustment, but it brings major results.

Chapter Five YES, Big Boys Do Cry! Women are expected to cry, but the same doesnt apply to men. Yet, crying provides release that is better and healthier than other outlets anxiety and depression. Studies show that tears from emotional experiences have a different chemical makeup than tears caused by an irritant such as peeling an onion, or tears from physical pain. Emotional tears are healthy because they help eliminate poisons and toxins. Tears also preserve physical health they help relieve tension. Physicians believe that many health problems plaguing men are due, at least in part, to an inability to show emotions or cry. Men on average live 72 years compared with 79 years for women and widening annually. Many believe this to be because of mens inability to deal with emotions.

Chapter Six DISCOURAGEMENT and LONELINESS Mans primary emotional soft spot tends to be a sense of discouragement. Men need a continuing vote of confidence. A man can never succeed enough. He will never be satisfied. However, if he succeeds in his wifes eyes, he never really fails. The womans primary emotional soft spot is usually a sense of loneliness. This is her psychological pitfall. She tends to be more loving, more emotional, more subjective, and she is more sensitive to human loneliness. She experiences a greater need for interpersonal relationships and for heart-to-heart communication.
